

ENGINEERING

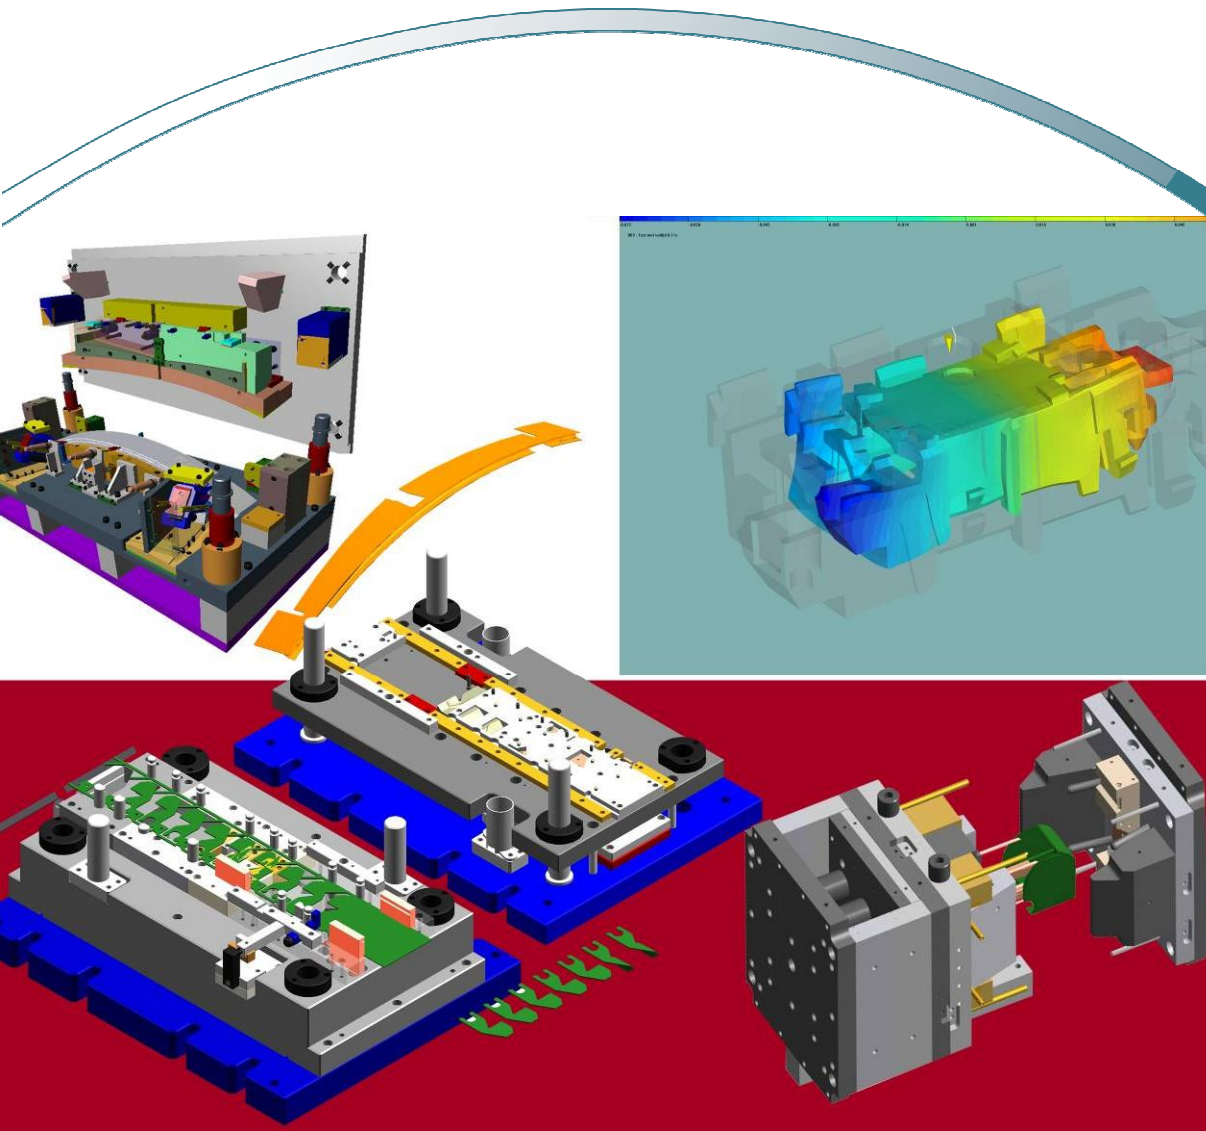

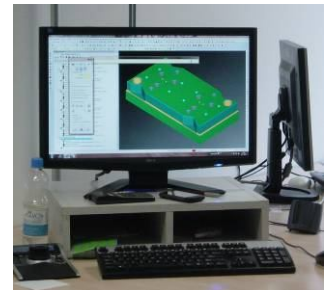

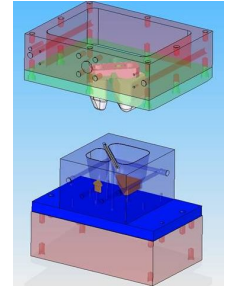

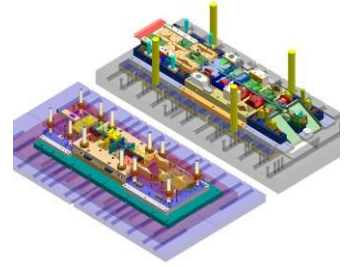

Innovation and creativity

At VDB Dollwin BV, our Engineering department fulfils an important role in the tool-making process, as it is in that department that we design and develop the dies and moulds that subsequently go into production.

In the case of the majority of problems, a standard solution is sufficient. Technical problems, on the other hand, demand specialist knowledge and that is what we at VDB Dollwin are able to provide. Our aim is to work with our client and that communication subsequently enables us to devise a solution that is innovative, appropriate and sometimes surprising.

Using a system of rapid prototyping and based upon detailed discussions with you, our client, we at VDB Dollwin set out to find the right solution for your technical problem.

In the engineering department at VDB Dollwin, we make use of a variety of 3D CAD stations, including **Solid Edge**. It goes without saying that these systems are compatible with several other CAD/CAM systems. We then go on to use the **Solid Edge/MasterCAM** system for milling, turning and zinc sparking.
